Patients will also need to follow specific preoperative instructions, such as fasting for 8 hours before surgery and avoiding alcohol and smoking.

Laparoscopic hepatectomy is performed using a laparoscope, which is a thin, lighted tube that is inserted into the abdomen through small incisions. The surgeon uses the laparoscope to visualize the liver and surrounding structures and to perform the surgery.

The surgical technique for laparoscopic hepatectomy varies depending on the size and location of the tumor or lesion being removed. However, the general steps of the procedure are as follows:

1. The abdomen is insufflated with carbon dioxide gas to create a working space.
2. The laparoscope is inserted into the abdomen through a small incision.
3. Additional incisions are made to allow the surgeon to access the liver.
4. The liver is mobilized to expose the tumor or lesion.
5. The tumor or lesion is removed.
6. The liver is repaired and the incisions are closed.

After laparoscopic hepatectomy, patients will typically stay in the hospital for 2-3 days. During this time, they will be monitored for complications and will receive pain medication.

Patients will also need to follow specific postoperative instructions, such as avoiding strenuous activity and lifting heavy objects.

The most common complications of laparoscopic hepatectomy include:

The risk of complications is higher in patients who have undergone major liver resections or who have underlying liver disease.

The prognosis for patients who undergo laparoscopic hepatectomy depends on the stage of their disease and their overall health. However, most patients who undergo laparoscopic hepatectomy have a good prognosis and can expect to live a long and healthy life.

Laparoscopic hepatectomy is a complex and challenging procedure, but it can offer significant benefits over traditional open surgery. Patients who are considering laparoscopic hepatectomy should discuss the risks and benefits of the procedure with their surgeon to determine if it is the right option for them.
